Limitations and responsible use

This project is a Data Science proof of concept. It must not be presented as a medical, toxicological or regulatory decision system.

The model does not know:

- ingredient concentration;
- route or duration of exposure;
- the complete formulation context;
- individual allergy or sensitivity;
- the current regulatory status of every substance;
- whether an OCR or product label was transcribed correctly.

The correct interpretation is: **the model predicts whether the product resembles products labeled positive under this specific reference-list rule.**
